Subject: Baffles project

CAUTION: External Sender

Please include this as public comment in your next council meeting.
My name is Doug ryan and I reside at 74 sir Francis drake Blvd in Ross.
The point of this email is to put you on notice
That should the town of san anselmo proceed with the "baffles project" in Corte madera creek you are aware it is NOT a flood control project as by design it provides no benefit in the event of flooding.
You should also be aware that as a matter of physics it is impossible to do such a project and be able to say with metaphysical certitude that it is absolutely water level neutral. In the case of a flood event, either san anselmo avenue or Corte madera creek will receive at least .01" more than would have happened had the project not been done.
The towns approval of this project, should it happen, will make you liable in the case of a flood event at my house and I will seek every means of redress available.
It is literally the height of folly to spend four million dollars to prep and install a temporary measure which provides no benefit in the event of a flood.
Please contact
Me directly should you wish to discuss this further.
